Early Journal Content on JSTOR, Free to Anyone in the World

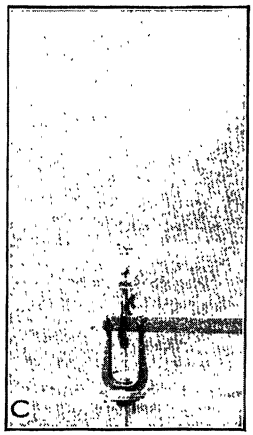
This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at http://about.jstor.org/participate-jstor/individuals/early-journal-content.

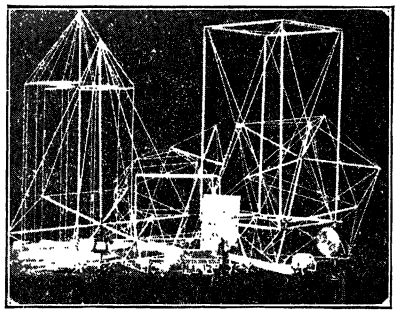
JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.



A Teacher's Class-Room Device

In Practical Demonstrations of Plane and Solid Geometry, Descriptive Geometry, Projection and Mechanical Drawing.

Hanstein's Complete Set of Models, permitting more than 500 mountings of Planes and Solids, their Intersections and Penetrations with "Goniostat" and "Rotostat."



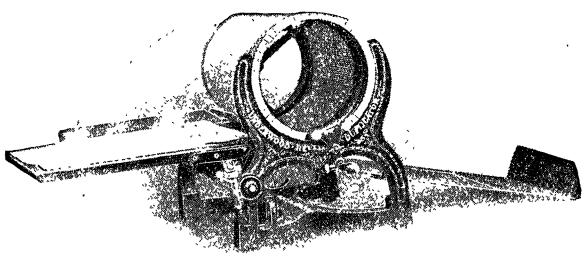
Third Edition of "140 Practical Problems in Plane Geometry." **Price to Teachers 75 cents per copy.**

Blackboard Compasses, warranted not to slip on any blackboard surface

Special Designs of Models ***Send for Circulars***

The Chicago Mathematical Supply House

2019 Mohawk Street **CHICAGO, Illinois**



UNDERWOOD REVOLVING DUPLICATOR

FOR

Reproducing Hundreds of Copies from one Original

A time, labor and money saver. Invaluable for preparation of examination papers, lectures, notices, bulletins, etc. An office printing device that will quickly and economically reproduce anything that can be typewritten, handwritten, or drawn. Fifty copies per minute costing 20 cents per thousand. Special educational discount offered to Teachers and Students in the Universities supporting the AMERICAN MATHEMATICAL MONTHLY. Your name on the coupon below will bring attention from the agency nearest your location.

Please demonstrate the Underwood Revolving Duplicator without obligation on my part.

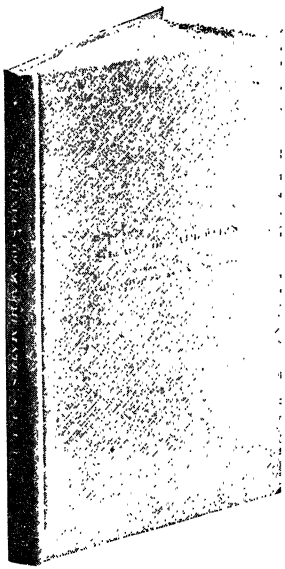
Address.....

Underwood Typewriter Co.,

39 South Wabash Avenue,

CHICAGO, ILL.

Syllabus of Mathematics



Compiled by a special committee of mathematicians on "The Teaching of Mathematics to Engineering Students," and published by the S. P. E. E. for distribution at the nominal price of

75 Cents

The book is printed on an excellent quality paper with covers of semi-flexible dark blue cloth; just the kind of a volume one likes to handle. Copies may be ordered on approval from **Henry H. Norris, Secretary, Society for the Promotion of Engineering Education, Ithaca, New York.**

THE NEW ERA PRINTING COMPANY

LANCASTER, PA.

is prepared to execute in first-class and satisfactory manner all kinds of Printing, Electrotyping and Binding. Particular attention given to the work of Schools, Colleges, Universities and Public Institutions

Books, Periodicals

Technical and Scientific Publications

Monographs, Theses, Catalogues

Announcements, Reports, etc.

All Kinds of Commercial Work

Publishers will find our product ranking with the best in workmanship and material, at satisfactory prices. Correspondence solicited. Estimates furnished.

THE NEW ERA PRINTING COMPANY

TERMS: Two dollars per year in advance. Fifty cents additional for delivery in Foreign Countries.
SUBSCRIPTIONS should be made payable to THE AMERICAN MATHEMATICAL MONTHLY, and sent to the TREASURER, B. F. FINKEL, Springfield, Missouri.
FOREIGN AGENTS: Z. P. Maruya & Co., Ltd., Tokyo, Japan.
A. Hermann, 8 Rue de la Sorbonne, Paris, France.

The need of a standard journal in this country, with aims such as those of the AMERICAN MATHEMATICAL MONTHLY, is attested by the fact that the subscription list has doubled since the reorganization ten months ago. All friends of the cause can assist in the good work by passing the word along to others and by sending to the Managing Editor the names of those who should be interested in such a journal.

The Constituency of the Monthly should include:

1) All teachers of the advanced courses in secondary schools, especially in those schools which offer trigonometry, college algebra, and analytic geometry.
2) All teachers of undergraduate courses in mathematics in colleges, universities, and engineering schools.
3) University professors of mathematics who wish to keep in touch with pedagogical movements in the collegiate field.
4) Graduate students in mathematics who wish to profit by historical and pedagogical discussions among teachers of experience
5) All productive workers in mathematics who may occasionally desire a place of publication for articles of minimum technical difficulty suitable for the promotion of scientific interest among the average mathematical readers.
6) All who are interested in the proposal and solution of problems, especially those who seek assistance from co-workers with respect to actual difficulties encountered in the prosecution of research.
7) All public libraries and the libraries of all colleges, normal schools, and the larger high schools.

For an outline of articles already published, see the Index to Volume XX in this issue. The same high standard will be maintained in succeeding numbers.

Sample Copies may be obtained from the MANAGING EDITOR, H. E. SLAUGHT, 5548 Kenwood (renamed from Monroe) Ave., Chicago, Ill.

The orders for Volume XX containing the "History of Logarithms" have exhausted the supply, except for certain numbers of which a few are left. New subscriptions should now begin with January, 1914.

The American Mathematical Monthly

For the convenience of contributors the following scale of prices for reprints is given. An order for reprints should be made in returning galley proof sheets to the Managing Editor.

SCALE OF PRICES

	4 pp.	8 pp.	12 pp.	16 pp.	20 pp.	24 pp.	28 pp.	32 pp.	48 pp.	64 pp.
25 Copies	$1.35	$1.80	$2.35	$2.60	$3.25	$3.85	$4.65	$5.10	$7.15	$9.35
50 Copies	1.45	1.95	2.60	2.92	3.67	4.30	5.20	5.70	8.10	10.60
75 Copies	1.60	2.30	3.05	3.45	4.70	4.95	6.10	6.60	9.45	11.05
100 Copies	1.80	2.60	3.50	3.95	5.10	5.90	7.00	7.50	10.85	13.05
150 Copies	2.05	3.05	4.20	4.85	6.75	6.95	7.35	9.15	13.20	17.55
200 Copies	2.35	3.75	5.25	6.15	7.85	8.75	10.45	11.05	16.35	21.65
300 Copies	2.95	4.75	6.85	8.15	10.60	11.90	14.10	14.85	22.15	29.55

Covers extra, on regular stock: 50 copies $1.00, and one cent for each additional copy.

The above represents actual cost of production. No reprints can be given free, but a few extra copies of the journal containing a contribution will be given to the author. All business communications should be addressed to the **Managing Editor, 5548 Kenwood Ave., Chicago, Ill.**

Church and Bartlett's

Elements of

Descriptive Geometry

By ALBERT E. CHURCH, LL.D., late Professor of Mathematics, United States Military Academy, and GEORGE M. BARTLETT, M.A., Instructor in Descriptive Geometry and Mechanism, University of Michigan.

Price, $2.25

PART I. ORTHOGRAPHIC PROJECTIONS. $1.75.

A MODERN treatment of descriptive geometry with applications to spherical projections, shades and shadows, perspective, and isometric projections, for use in technical schools and colleges. This work differs somewhat widely from Church's Descriptive Geometry. The figures and text are included in the same volume, each figure being placed beside the corresponding text; general cases are preferred to special ones; a sufficient number of problems are solved in the third angle to familiarize the student with its use; a treatment of the profile plane of projection is introduced; many exercises for practice have been included; several of the more difficult elementary problems have been illustrated by pictorial views; in the treatment of curved surfaces, all problems relating to single-curved surfaces are taken up first, then those relating to warped surfaces, and finally those relating to surfaces of revolution. Experience proves this order to be a logical one, as the procedure is from the simple to the more complex. Also the student is more quickly prepared for drawing-room work on intersections and developments; and in case it is desired to abbreviate the course by omitting warped surfaces, the remaining problems will be found to be arranged consecutively.

Correspondence solicited.
